THIS IS UNEVALUATED INFORMATION 25X1

1. In May 1954, a new ~~new~~ rotating antenna was mounted on the tower in which the radar laboratory of Funkwerk Koepenick is located. The radar development in question is that of a ship-borne anti-collision device (Kollisions-schutzperast) under the supervision of Rudolf Menthey.
2. There are now two ~~new~~ rotating antennae on top of the tower. The first one was put there in the fall of 1953. The mast of the new antenna is four or five meters higher than that of the old one. The new antenna is **alleged** to have a feed system different from that of the old one. *alleged*
3. Both antennae are being tried out at different times.
